Category:Indian films Category:Hindi-language films Category:2013 films Category:Indian action comedy films Category:2010s Hindi-language films Category:Indian remakes of American films Category:2010s Kannada-language films Category:2010s action comedy filmsQ: SQL Server, take a key and find its max value(s) I have a table with ids(UNIQUEIDENTIFIER) and numbers of the same id(a few duplicates). I want to find the single id and number with the maximum (non-zero number). SELECT Id, Max (Number) FROM dbo.MyTable The table is like this: IdNumber 1|4 1|4 1|3 1|3 1|2 1|2 2|5 2|5 So the query should return: 1|4 2|5 Thanks! A: You can use a common table expression for this: WITH cte AS (SELECT Id, Number, ROW_NUMBER() OVER (PARTITION BY Id ORDER BY Number) rn FROM dbo.MyTable) SELECT Id, Number FROM cte WHERE rn = 1 The ORDER BY is there to make sure that you have the maximum Number on top. If you want to return the record that has the maximum Number, then it becomes: SELECT Id, Number FROM cte ORDER BY Number DESC FETCH FIRST 1 ROWS ONLY Note that this will still return the record with the maximum Number. If you want the maximum Number, you should make sure that you have the maximum in the first row: SELECT Id, Number FROM
